CleanCache (Final 2022)

It is a full-featured Internet browser cleaner that allows you to delete private information, program entries and extensions from your computer. This tool comes with multiple options that make it easy to clean up unnecessary data from web browsers.

The program can delete your browser history, recent entries, typed URLs, cache, cookies, browsing history, downloaded files, visited websites, indexes, MRU items and bookmarks, as well as your add-ons. You can make the browser automatically clean these items by creating an add-on or schedule it to run when your PC starts up or shuts down. The application doesn't affect system files. It is an easy-to-use program, so you can simply access the tool's options and settings by pressing the tab to access them.

Features of CleanCache: • You can access CleanCache's Settings, Add-ons, Typed URL history, Delete URLs, Search history, and some more tabs from a new window. • The program provides a list of installed programs. You can uninstall these programs to keep CleanCache working and to create a CleanCache free space. • CleanCache's add-ons include options that allow you to specify folders, files, Web pages and extensions to clean up. • When you start CleanCache, it's possible to add extra options to it.

CleanCache's settings are also listed in a new window. • CleanCache allows you to choose a program for startup and allows you to select the options you want. You can have CleanCache clean only browsers or web browsers, only installed programs or just one or two of them, only programs you currently use or only the most recently installed ones. • You can choose when to clean, can create log files and optionally can reboot or turn off your PC after cleaning. • CleanCache can delete an item from the list of programs that auto-clean, thus you can control them. • You can create your own cleaning scripts that allow you to perform special actions. • The application includes a comprehensive help file with snapshots and a full list of system events. • If you are getting a message that says CleanCache isn't responding to a system request, we recommend that you check your email. The program often gets overloaded by emails and is unable to process them all. What you can do with CleanCache? CleanCache has several options that enable you to clean the most unwanted data from your computer's browsers and programs, even if they were added to browsers and programs

CleanCache Crack+ Download PC/Windows

File manager for Office XP. Allows to open various types of Office files (e.g..ppt,.doc,.xls,.rtf,.txt,.pptx,.odt,.ods, etc.) from within Windows Explorer. This feature works only on files that are associated with MS Office - otherwise the "Open" button is disabled. Generally, you can get any type of Office file from the following locations: - File Manager - click on the Office 2007 Programs icon, select the item you wish to open and press "Open" - Add-ons for Office - Office 2007 - Programs - [Tools] - Add-ons for Office - Open Internet Explorer and type the corresponding

address of the file - Add-ons for Office - Office 2007 - Programs - [Tools] - Add-ons for Office - Open Outlook Express - select a file and press "Open" - OpenOffice.org - Tools - OpenOffice.org - Open - Windows Media Player - Open Internet Explorer and select the corresponding file The software provides an option to set the default program for opening particular types of files. You can assign a shortcut to the "Open" button. KeyMACRO is freeware for personal and commercial use. KeyMACRO Description: File manager for Office XP. You can assign a shortcut 1d6a3396d6

CleanCache is an application that can help you delete private information found in your web browsers. The user interface of the program consists of a standard window in which you can access a few tabs. So, this tool allows you to clean temporary Internet files, history, cookies, typed URLs, Form AutoComplete (use IE or CleanCache deletion method). But you can also select an alternative browser (e.g. Avant Browser, Maxthon), clean the index.dat file found in temporary Internet files, history and cookies. Furthermore, you can clean outbox and sent items in Outlook Express, as well as Internet Explorer and OE items at Windows startup, shutdown or when IE closes (you can set a delay time). Plus, you can manage cookies and typed URLs.

Additionally, you can select a Mozilla profile and delete cache, history, AutoComplete, cookies, saved username and passwords, typed URLs and download history. In the case of the Opera browser, you can clean cache, history, cookies, typed URLs, images, sessions, downloaded history and visited websites. Furthermore, you can get rid of Windows content when it comes to recent documents, start run and search history, user temporary directory, MRU registry entries, Recycle Bin, clipboard, XP Prefetch, UserAssist registry entries, Media Player, Word Pad, Office applications, and more. Last but not least, you can create a new additive or edit an existing one, manage programs that automatically run at system startup, wipe files, uninstall apps, enable stealth mode for CleanCache, set it to run at Windows startup and to create log files, reboot or turn off PC after a manual clean, use secure cleaning, and others. The program takes up a low-to-moderate amount of system resources and includes a comprehensive help file with snapshots. Except for an error that popped up when we accessed "Tools" ("Cannot open registry key"), we haven't found anything wrong with CleanCache. It just needs to improve its interface. We highly recommend it to all users. Details: CleanCache is an application that can help you delete private information found in your web browsers. The user interface of the program consists of a standard window in which you can access a few tabs.
